Biography of Winthrop E. Stone

Winthrop E. Stone was the fifth President of Purdue University. He was born in Chesterfield, New Hampshire on June 12, 1862. Stone earned a Bachelor's of Science from Massachusetts Agricultural College in Chemistry in 1882 (some documents report a later degree from Boston University in 1886). He then spent several years studying at the University of Göttingen in Germany. He left in 1888 to work as chief chemist at the State of Tennessee Agricultural Experiment Station and then, in 1889, became professor of chemistry at Purdue University (Purdue Reamer Club 34).

Stone was appointed to the post of Vice President of Purdue in November, 1892, making him the first vice president in the university's history. He became President of Purdue University following the death of President James H. Smart in February 1900. During his Administration, Stone developed the agriculture program, building the Agriculture Hall (currently Pfendler Hall)(Reamer 33), the Agricultural Experimental Station, and various agricultural farms. Other structures built during Stone's Administration included "Eliza Fowler Hall, the Memorial Gymnasium, the original Civil Engineering Building, and the original Physics Building" (Reamer 34). Under his leadership, Purdue also developed its engineering ("Past Presidents"), education, and home economics programs (Reamer 34).

While vacationing in the Rocky Mountains of Canada, Stone died in 1921 when he fell during a mountain-climbing expedition on Mount Eon. Stone Hall was built as a memorial to him following his death (Reamer 34).

Collection Description

Scope

The Winthrop E. Stone papers (1880s-1990s; 20.75 cubic feet) documents the life of Winthrop E. Stone, his family, and his administration as the fifth president of Purdue University. They feature Stone's academic career as a chemist and agriculturalist as well as his various policies and endeavors while President at Purdue. They also document his interest in mountaineering. Extensive records of communication and reporting on Stone's accidental death while mount climbing is also included. Types of materials include: correspondence, diaries, personal journals, negatives, speeches, scrapbooks, academic journals, black-and-white photographs, and artifacts.

The Papers are organized into two series: Presidential Materials and Personal Materials.

Arrangement

1. Presidential materials, 1880s-1920s (6.25 cubic feet).

This Series documents the administration of the fifth Purdue University President, Winthrop E. Stone. It includes various speeches Stone gave on campus and at other venues, as well as official correspondence for the Office of the President. It also documents financial transactions of the administration. It features a variety of material related to the 1903 train wreck, which occurred during Stone's administration. Finally, it illustrates Stone's academic research and publishing during his administration. Major subseries include:

Addresses, 1901-1921

Correspondence, 1899-1920s

Publications, 1900s-1920s

Financial Materials, 1880s-1920s

Scrapbooks and newsclippings, 1901-1920s

Trainwreck materials, 1903

Photographs and pictorial materials, 1904-1920s

Materials in the series are arranged by form.

2. Personal and professional materials, 1870s-1990s (14.25 cubic feet)

This Series documents the personal life of Winthrop E. Stone and his family. It includes photographs of various family members and colleagues, including images and maps of mountains, mountaineering, and natural settings Stone visited. It also records Stone's correspondence with family and with professional colleagues. It features Stone's daily journals, which document the years 1880-1921, with a gap between 1900-1909. Additionally, it also details Stone's academic research and publishing. Finally, it records Stone's death and memorial after his fatal fall while mountain climbing.

Subseries:

Correspondence, 1880s-1920s

Academic research and publications, 1880s-1900s
Addresses, 1892-1898
Photographs, 1870s-1920s

Processing Information

Whenever possible, original order of the materials has been retained. Many materials have been placed in acid-free folders and acid-free boxes. Some loose newsprint has been photocopied and original newspaper clippings have been discarded. Some clippings containing images of people or color graphics, or front pages of newspapers, have been preserved for display purposes, with photocopies made available for research. Oversized materials and artifacts have been separated and grouped into individual series for preservation purposes.
